

The Mowing Company since 1951

Robèrine

The Mowing Company

The Roberine brand is back on the market. That is good news for all professionals who specialise in the management of sports grounds, parks and green spaces in urban areas. It is no coincidence once you know that, since 1951, Roberine stood for high quality and a beautiful end result; a technically high-quality product and one that caused the competition to stand up and take note. Even when Roberine disappeared from the market, the name lived on in the hearts of professionals.

In fact, Roberine's technology has never really been gone. Roberine's technology has been used in mowing machines by another leading brand to the present day. The factory in Enschede has continued operating all these years. Love for the brand and passion for the technology have never been absent. When the opportunity presented itself for Roberine to make a comeback on the market, our hearts started beating faster.

Mowing at top level

The Roberine F3 is the first machine that appeared on the market under the Roberine brand name. It is a three-unit, self-propelled flail mower that is the result of many years of experience in developing and building mowers in combination with the knowledge of high-end technology. Through the cooperation with Votex, we were able to develop a high-quality flail mower which exactly fits the trend in the market towards reducing mowing frequency.

In addition to the F3, the F5 is also available. The design is characterised by 5 flail mower units, giving it a mowing range of 345 cm. The F series can be recognised by grey mower units.

Roberine is also launching a reel mower series: the R3 and R5. You will recognise these mowers by their green mower units. With Roberine reel mowers, too, you can count on a beautiful mowing pattern and a competitive price.

The perfect workplace

Roberine stands for both traditional craftsmanship and advanced technology. This combination ensures satisfaction at work. And since we are on the subject of satisfaction at work, we would like to add that the operator is assured an ergonomically sound workplace.

The suspension seat is comfortable, which is no unnecessary luxury if you are on the go all day long. The armrest with the controls is easy to adjust, so that the operator can find the ideal working posture at all times. The armrest moves with the seat, allowing the operator to always be in control of the machine. The Roberine F and R series can also be equipped with an insulated cabin, which minimises noise. In order to make this workplace even more comfortable, optional airconditioning is available. Your dealer will be happy to inform you about the possibilities.

Built to perform

The Roberine F and R series have been developed by experienced engineers. The styling was entrusted to a leading design agency. The basic principle underlying the design was to develop a machine that would surpass any other mower. Roberine had to set the new standard at all levels, from reliability to durability; from the ergonomics to maintenance; from performance to cost per square metre. And we have pulled it off.

Roberine machines are constructed in Enschede, in one of Europe's most modern factories. The manufacturing method used is equivalent to that of leading car manufacturers around the world. As a result, we are also in a position to deliver a new standard. Each Roberine is engineered for optimum performance in every respect. That, too, is what lies at the roots of the brand.

The people behind Roberine

Launching a world product onto the market requires more than good styling, timeless design and a reliable product. You need an organisation that is aware of the fact that you have to make good on your promises. Roberine is held up by experienced and talented people who want to make the brand a success story all over again. That is not enough. You also need a network that believes in the power to develop.

Roberine is sold by a select group of dealers: professionals who believe in the brand and in our products. At present, that means the Roberine F and R series. And, tomorrow, we will have a wide range of machines and tools that will ensure that the professionals working with Roberine will be just as proud of the brand as the professionals that create it.
